ACL Reconstruction w/Meniscal Repair Rehabilitation Protocol

Seth L. Sherman, M.D.
Tamara L Young, ATC, OTC, MEd

Department of Sports Medicine

**Diagnosis:** Right/Left ACL Reconstruction with BTB Autograft/Allograft, Hamstring Autograft with medial/lateral meniscal repair

---

**Date of Surgery:** _________________________

Frequency 2-3 times per week.

- No open chain or isokinetic exercises
- Provide patient with home exercise program per protocol

**Weeks 2-6 - Period of protection**

- Toe-touch weight bearing with crutches for 4 weeks. Brace locked in extension for ambulation for 4 weeks. Brace locked in extension at night for 2 weeks or until full terminal extension is attained.
- Begin weight bearing as tolerated with brace unlocked at 4 weeks. No weight bearing past 90 degrees for first 6 weeks post operatively.
- ROM – progress through passive active and resisted ROM as tolerated. Extension board and prone hang with ankle weights (up to 10 lbs) recommended. Stationary bike with no resistance for knee flexion (alter seat height as ROM increases).
  **ROM Goals – Full extension by 2 weeks, 120 degrees of flexion by 6 weeks.**
- Patellar mobilization, 5-10 minutes daily.
- Strengthening – quad sets, SLRs with knee locked in extension.
- No restrictions to ankle/hip strengthening.
- **No sooner than 4 weeks post operatively,** begin closed chain work (mini-squats/weight shifts, leg press 0-80 degree arc) when full weight bearing. Proprioception training. Initiate Step Up program.
- Modalities prn (ie electrical stimulation, ultrasound, etc) per discretion of therapist.
- Heat before therapy sessions.
- Ice after therapy sessions.
- May participate in aquatherapy after week three.
Weeks 6-12
- Discontinue crutches and brace when gait in non-antalgic (about 6 weeks post op) and patient has adequate quad control.
- ROM – Continue with daily ROM exercises
  **Goal – increase ROM as tolerated to full**
- Continue stationary bike for ROM, strengthening and cardio.
- Continue modalities prn as indicated above.
- Heat before therapy sessions.
- Ice after therapy sessions.

Weeks 12-18
- Advance strengthening as tolerated, continue closed chain exercises. Increase resistance on equipment.
- Begin forward treadmill running program when 8” step down is satisfactory (No sooner than 12 weeks).
- Initiate agility training (figure 8s, cutting drills, quick start/stop, etc.).
- Begin plyometrics and increase as tolerated.
- Begin to wean patient from formal supervised therapy encouraging independence with home exercise program.
- Continue modalities prn as indicated above.
- Heat before therapy sessions.
- Ice after therapy sessions.

Weeks 18+
- Continue strengthening/flexibility
- Initiate sport-specific agility drills
- Advanced plyometric program starting at 22 weeks
- Return to sports approx 22-24 weeks post-operatively *(MD CLEARANCE REQUIRED)*
- Continue modalities prn as indicated above.
- Heat before therapy sessions.
- Ice after therapy sessions.
